

OneVoice MAX

Whether you're looking for wide area connectivity or you need to build a better system for communicating with team members in your building, Goosetown Communications offers a wide range of products and services to help you accomplish your goals.

We also offer managed services to take care of your communications needs so you can focus on the things you do best and leave the worry over your communications needs to Goosetown. Contact us today to learn more about the Wide Area OneVoice MAX network, the services we offer, and which ones benefit for your business best.

Our wide area network radio solutions allow you to communicate well, improving efficiency, productivity, and safety within your entire organization. Even among the men and women working in the field and on-the-go for your team.

We are working to help you grow your business, and will help identify the communications solutions that best meet your organizational needs and your budget. Our goal is for businesses to improve the productivity and safety for the people in the office, out in the field, or on the road by offering quality products and services at reasonable prices.

Communication and Mobile Management Solutions

TeamConnect solves all your needs with Instant Nationwide Group or Private clear voice communication, optional GPS-based team member tracking with geofencing, and instant status updates including voice and photo documentation. Now you can track and improve job productivity and worker performance, and reach your business colleagues and co-workers when and where you need to.

Who is TeamConnect?

TeamConnect is an American owned, hosted, and designed software company that delivers advanced, crystal clear nationwide push-to-talk (PTT) communication solutions. It operates as a standalone system and can also be integrated with OneVoice MAX and LMR or P25 networks using a donor radio. TeamConnect's push-to-talk over cellular (PoC) platform provides nationwide coverage at a fraction of the cost of traditional radio systems, making it a practical alternative or complement to private LMR systems.

TeamConnect is well suited for industries such as transportation, student transport, waste management, concrete, towing, limousine services, and independent contractors. It supports fast, reliable group communication while keeping users compliant with hands-free and distracted driving regulations.
